UI/UX DESIGN & PRODUCT DESIGN · TASK 2

Information Architecture, User Flows & Wireframes

IA, content strategy, 5 user flows, journey map, card sort, sitemap and 13 low-fidelity wireframes

7	5	32	13
IA groups	user flows	cards sorted	wireframes

Eswar Mahalingam

PROGRAMME
Sumerix Global · UI/UX Design · 36 weeks

BATCH START
15 October 2026

PRODUCT
ShiftLoop — hub shift-handover app

1 · Summary

7	5	32	13
IA groups · 5 bottom-nav tabs	user flows with error paths	cards sorted into 6 groups	low-fidelity wireframes

Task 2 turns the Task 1 research into structure: what lives where (IA), how users move (flows), how they feel along the way (journey map), what we call things (card sort, content inventory) and how each screen is laid out before any colour is applied (wireframes).

Design decisions carried from research: handover is a first-class tab (top pain point) · alerts separate from handovers so safety never gets buried · Dashboard for leads and managers · Search is global, not a tab · offline status is always visible.

2 · Part A — Information architecture

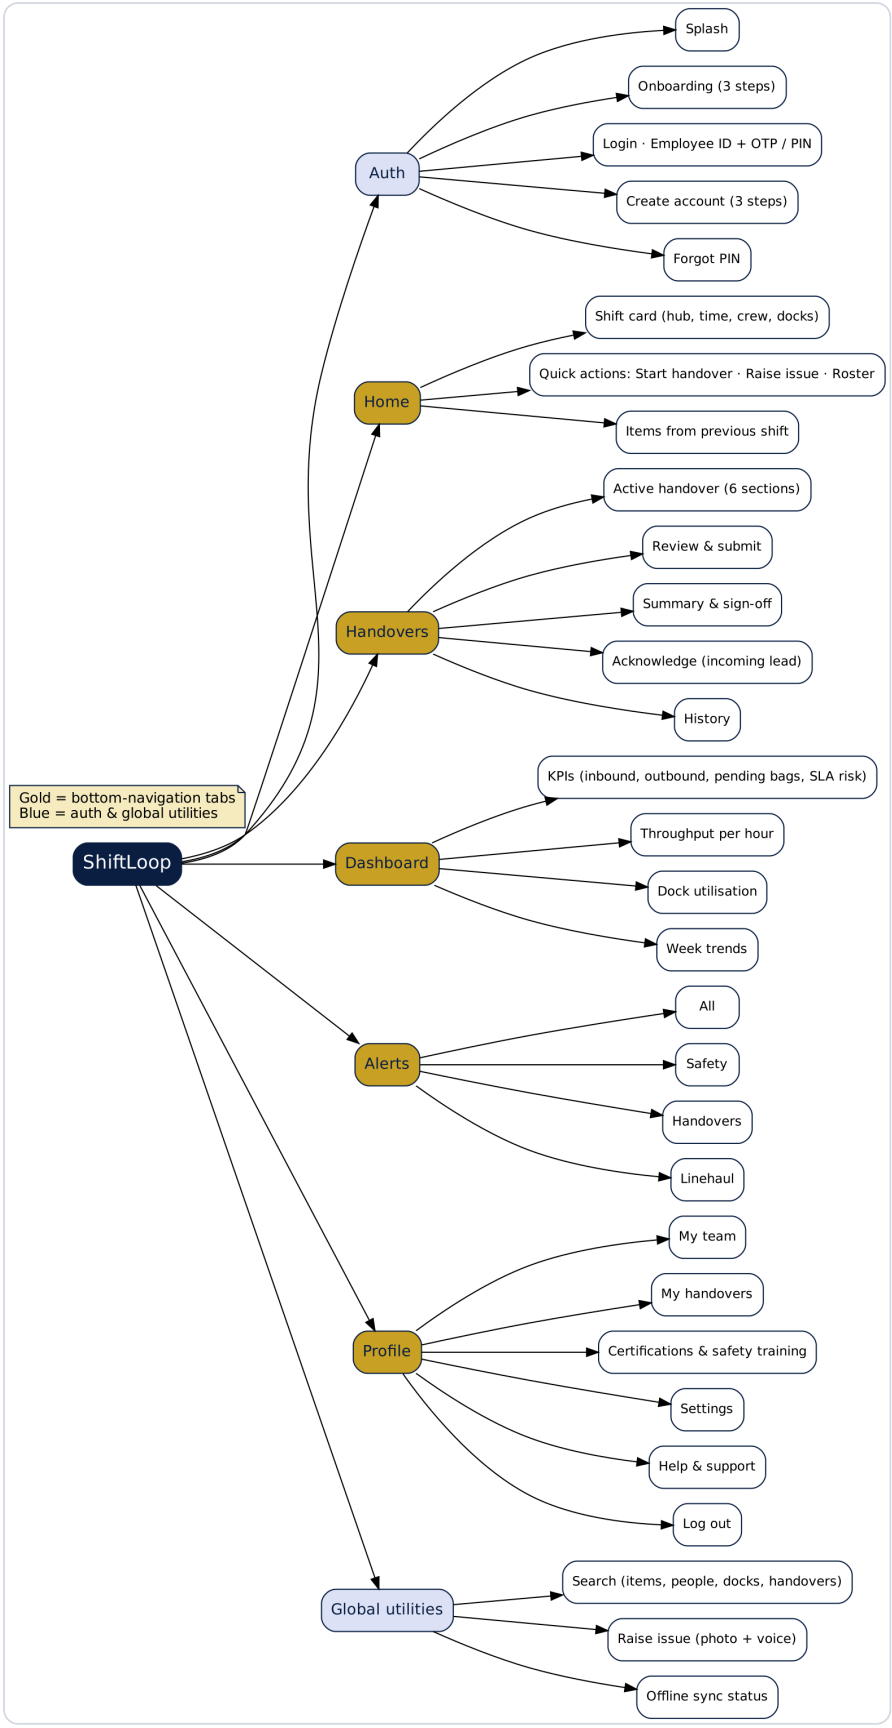

Figure 1 — Hierarchical IA: 5 bottom-navigation tabs (gold) + auth and global utilities (blue).

Group	Contents

Auth	Splash · Onboarding (3 steps) · Login · Employee ID + OTP / PIN · Create account (3 steps) · Forgot PIN
Home	Shift card (hub, time, crew, docks) · Quick actions: Start handover · Raise issue · Roster · Items from previous shift
Handovers	Active handover (6 sections) · Review & submit · Summary & sign-off · Acknowledge (incoming lead) · History
Dashboard	KPIs (inbound, outbound, pending bags, SLA risk) · Throughput per hour · Dock utilisation · Week trends
Alerts	All · Safety · Handovers · Linehaul
Profile	My team · My handovers · Certifications & safety training · Settings · Help & support · Log out
Global utilities	Search (items, people, docks, handovers) · Raise issue (photo + voice) · Offline sync status

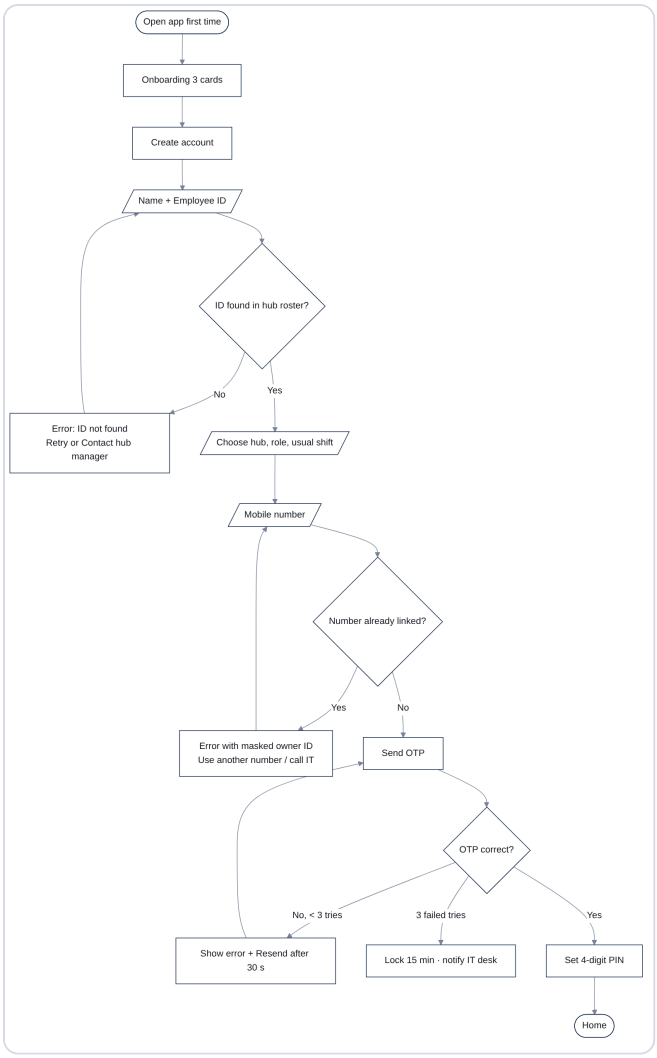

3 · Part B — Content strategy & inventory

Labels use the words floor staff already say in huddles (*handover, pending loads, exceptions, dock*). Severity is always shown as text + colour (never colour alone). Full inventory: docs/content_inventory.csv.

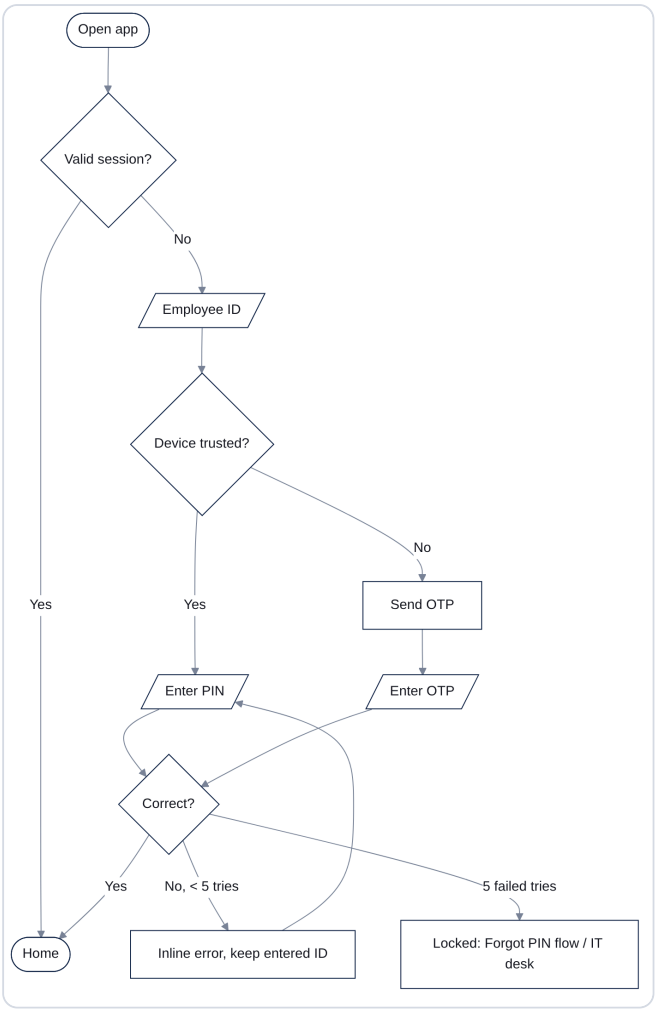

ID	Screen	Section	Content / feature	Type	Priority
S01	Splash	Brand	Logo, product name, tagline, version, offline badge	Content	P2
S02	Onboarding	Carousel	3 value cards: Handover in 5 min · Works offline · Every item owned	Content	P2
S02	Onboarding	Actions	Next · Skip	Action	P2
S03	Login	Form	Employee ID, Hub, OTP (6 boxes)	Data entry	P1
S03	Login	Actions	Sign in · Resend code · Use PIN · Create account	Action	P1
S04	Create account	Stepper	Details → Hub & role → Verify	Navigation	P1
S04	Create account	Form	Full name, Employee ID, Role, Hub, Usual shift, Mobile, consent	Data entry	P1
S05	Home	Shift card	On-shift status, time, hub, crew, docks active, open items, checklist pre-fill %	Data	P1
S05	Home	Quick actions	Start handover · Raise issue · Roster	Action	P1
S05	Home	List	Items from previous shift with severity chips	Data	P1
S06	Dashboard	KPIs	Inbound, Outbound, Pending bags, SLA at risk	Data	P1
S06	Dashboard	Charts	Throughput per hour, Dock utilisation	Data	P2
S07	Search	Search	Query field, filter chips, grouped results, recent searches	Navigation	P2
S08	Handover	Progress	Sections done, time left, saved-offline status	Data	P1
S08	Handover	Sections	Shift summary · Pending loads · Exceptions · Safety walk · Equipment · Notes	Data entry	P1
S08	Handover	Evidence	Photo capture, voice note, counters	Action	P1
S08	Handover	CTA	Review & hand over	Action	P1
S09	Summary & sign-off	Summary	Counts by section, critical items list	Data	P1
S09	Summary & sign-off	Sign-off	Outgoing / incoming leads, timestamps, acknowledgement ticks	Action	P1
S10	Profile	Identity	Avatar, name, role, hub, shift chip, personal KPIs	Data	P2
S10	Profile	Menu	My team, My handovers, Certifications, Language, Settings, Log out	Navigation	P2

S11	Settings	Toggles	Reminders, Safety alerts, Quiet hours, Large text, High contrast, Voice notes, Offline mode	Action	P2
S12	Alerts	List	Grouped by Tonight / Earlier, unread markers, filter chips, Mark all read	Data	P1
S13	Help & support	Help	Search articles, popular FAQs, IT desk chat, call manager, report a problem	Content	P3
Global	Bottom navigation	Nav	Home · Handovers · Dashboard · Alerts (badge) · Profile	Navigation	P1

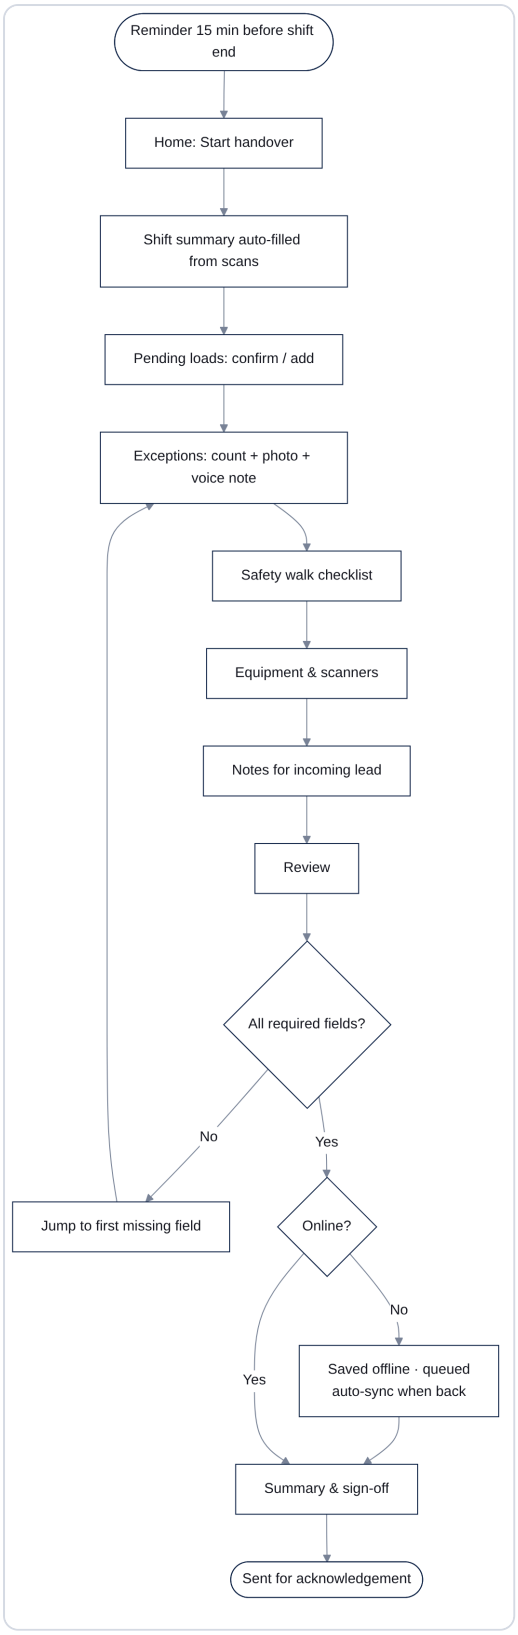

4 · Part C — User flows (success + error paths)

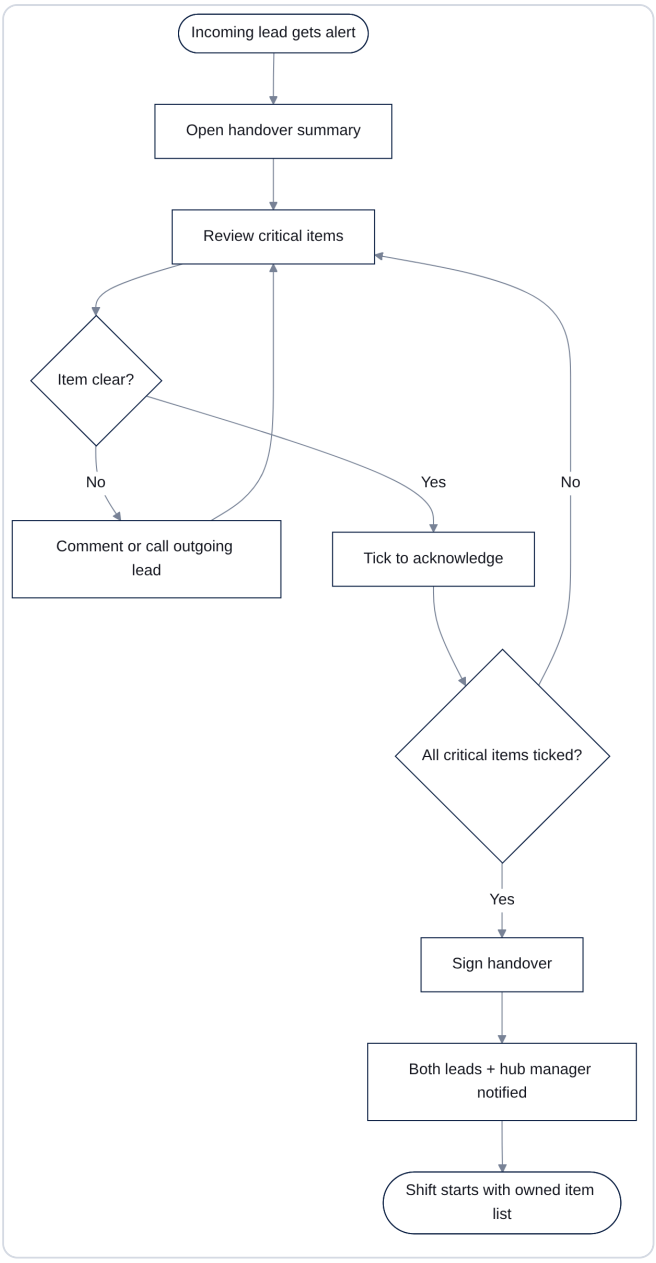

Flow 1 — Registration

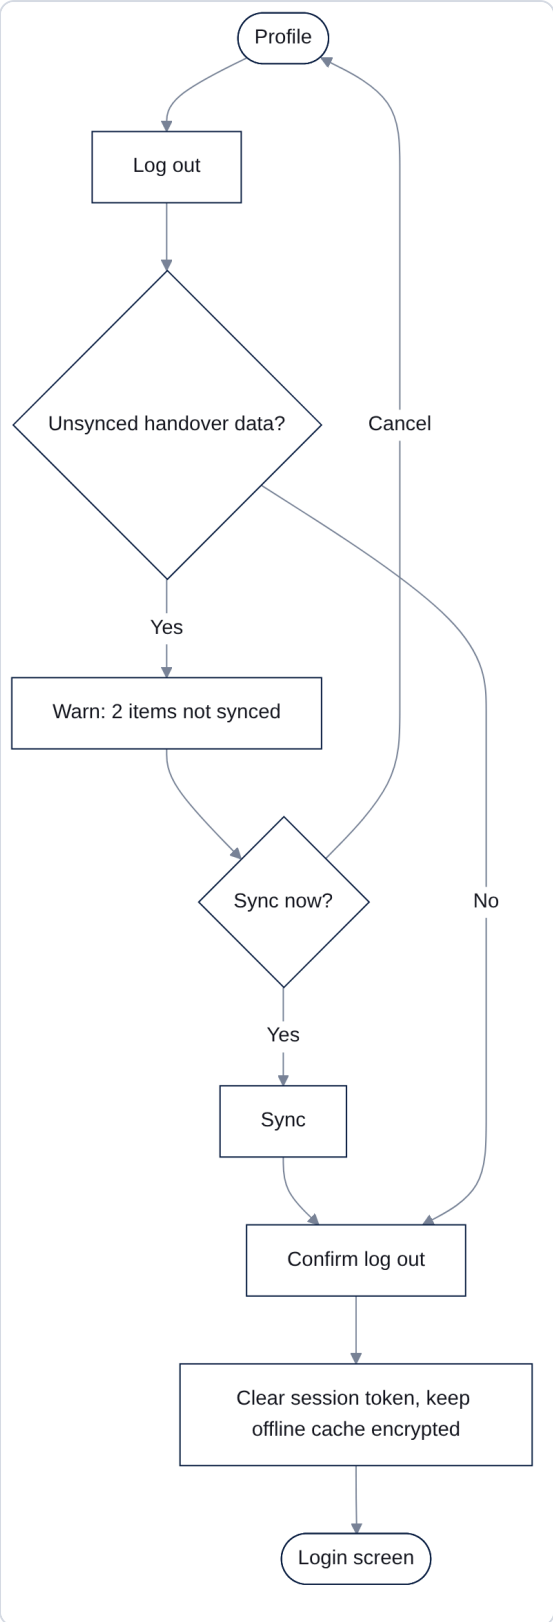

Flow 2 — Login (OTP + PIN fallback)

Flow 3 — Main task: create & submit handover

Flow 4 — Confirmation: incoming lead acknowledges

Flow 5 — Logout with unsynced-data guard

Reading the flows

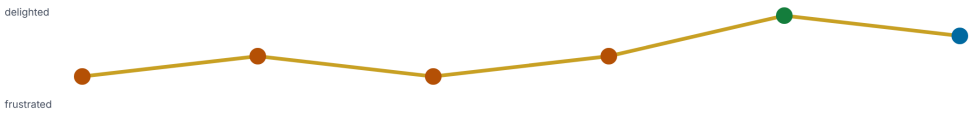

- **Rounded boxes** = entry / exit points; **rectangles** = screens or system actions; **diamonds** = decisions.
- Every decision has an **error path** that loops back with a recovery action (resend OTP, retry sync, save offline, escalate).
- Flows 3 and 4 form one loop: the outgoing lead's submit creates the incoming lead's acknowledgement task; unacknowledged critical items escalate to the hub manager after 15 minutes.
- Logout never discards data: unsynced handovers trigger a warning and an optional sync first.

Flow	Entry point	Success end	Key error paths
Registration	Invite SMS / Splash	Home	Employee ID not found · OTP expired · weak signal
Login	Splash	Home	Wrong OTP ×3 → PIN · locked → supervisor reset
Create handover	Home quick action	Submitted summary	Offline → queued · missing mandatory section
Acknowledge	Push / Alerts	Signed handover	Query raised · no ack in 15 min → escalation
Logout	Profile	Login screen	Unsynced items → sync / cancel

5 · Part D — Customer journey map

Customer journey map — Divya, night-shift team lead

From first hearing about ShiftLoop to giving feedback after her first week.

	Awareness	Discovery	Registration	Product usage	Goal completion	Feedback
Goals	Learn there's a better way than WhatsApp	Understand what ShiftLoop does for a lead	Get in quickly with employee ID	Capture the shift in < 5 min	Next lead acknowledges every critical item	Tell the hub what to improve
Actions	Hub manager announces pilot in shift huddle	Watches 60-s demo, sees onboarding cards	Enters ID, hub, role, OTP, sets PIN	Fills 6 sections, adds photo + voice note	Reviews summary, sends for acknowledgement	Rates handover, flags missing field
Touchpoints	Huddle · notice board · WhatsApp	Play Store · onboarding	Login / registration	Handover checklist · offline banner	Summary · alerts	In-app rating · IT desk
Emotion						
Pain points	"Another app?" scepticism	Unclear if it works offline	OTP fails with weak signal	Long forms at 5:45 a.m.	Waiting for incoming lead to open the app	Feedback disappears into a void
Opportunities	Lead champions + 5-min demo	Show 'works offline' up front	PIN on trusted device; OTP fallback	Auto-fill from scans; voice notes	Push + SMS fallback; escalate after 10 min	Close the loop: 'You asked, we fixed'

The emotional low points are **registration on weak signal** and the **5:45 a.m. data entry**; the peak is **goal completion** when the incoming lead acknowledges. Opportunities are carried into the wireframes: PIN on trusted devices, pre-filled summary, voice notes and an escalation timer.

6 · Part E — Card sorting

Status: simulated pilot. Placement counts come from a DECLARED SIMULATED run (8 virtual participants) used to rehearse the analysis. Run the real hybrid sort with 8 hub colleagues (free tools: FigJam board or paper cards) and replace docs/card_sort_results_SIMULATED.csv.

Method

- Hybrid sort: 6 proposed groups, participants may rename or add
- 32 cards = every feature/content item from the inventory
- Agreement = share of participants choosing the most common group

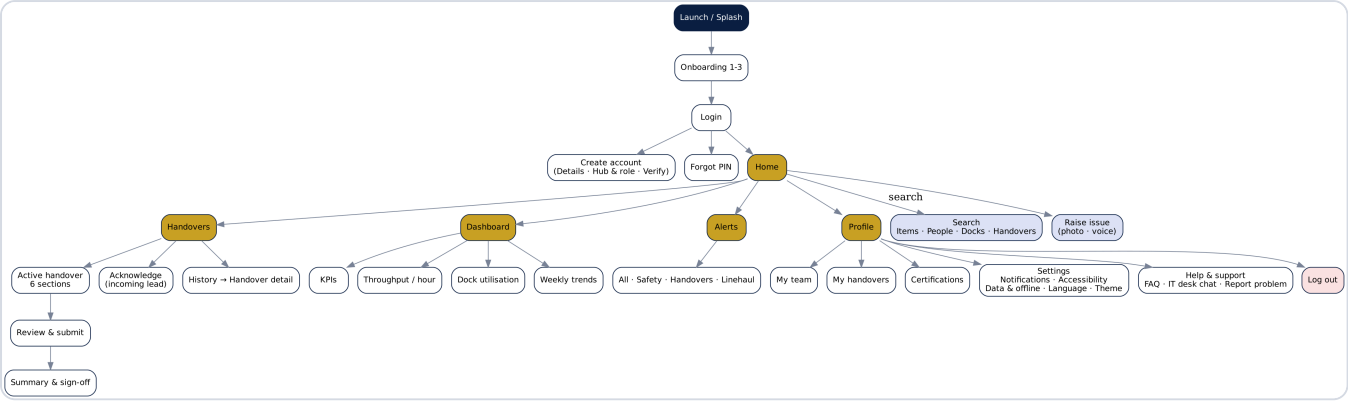

Cards below 75% agreement → design responses

Card	Proposed	Most chosen	Agreement
Equipment status	Handovers	Handovers	50%

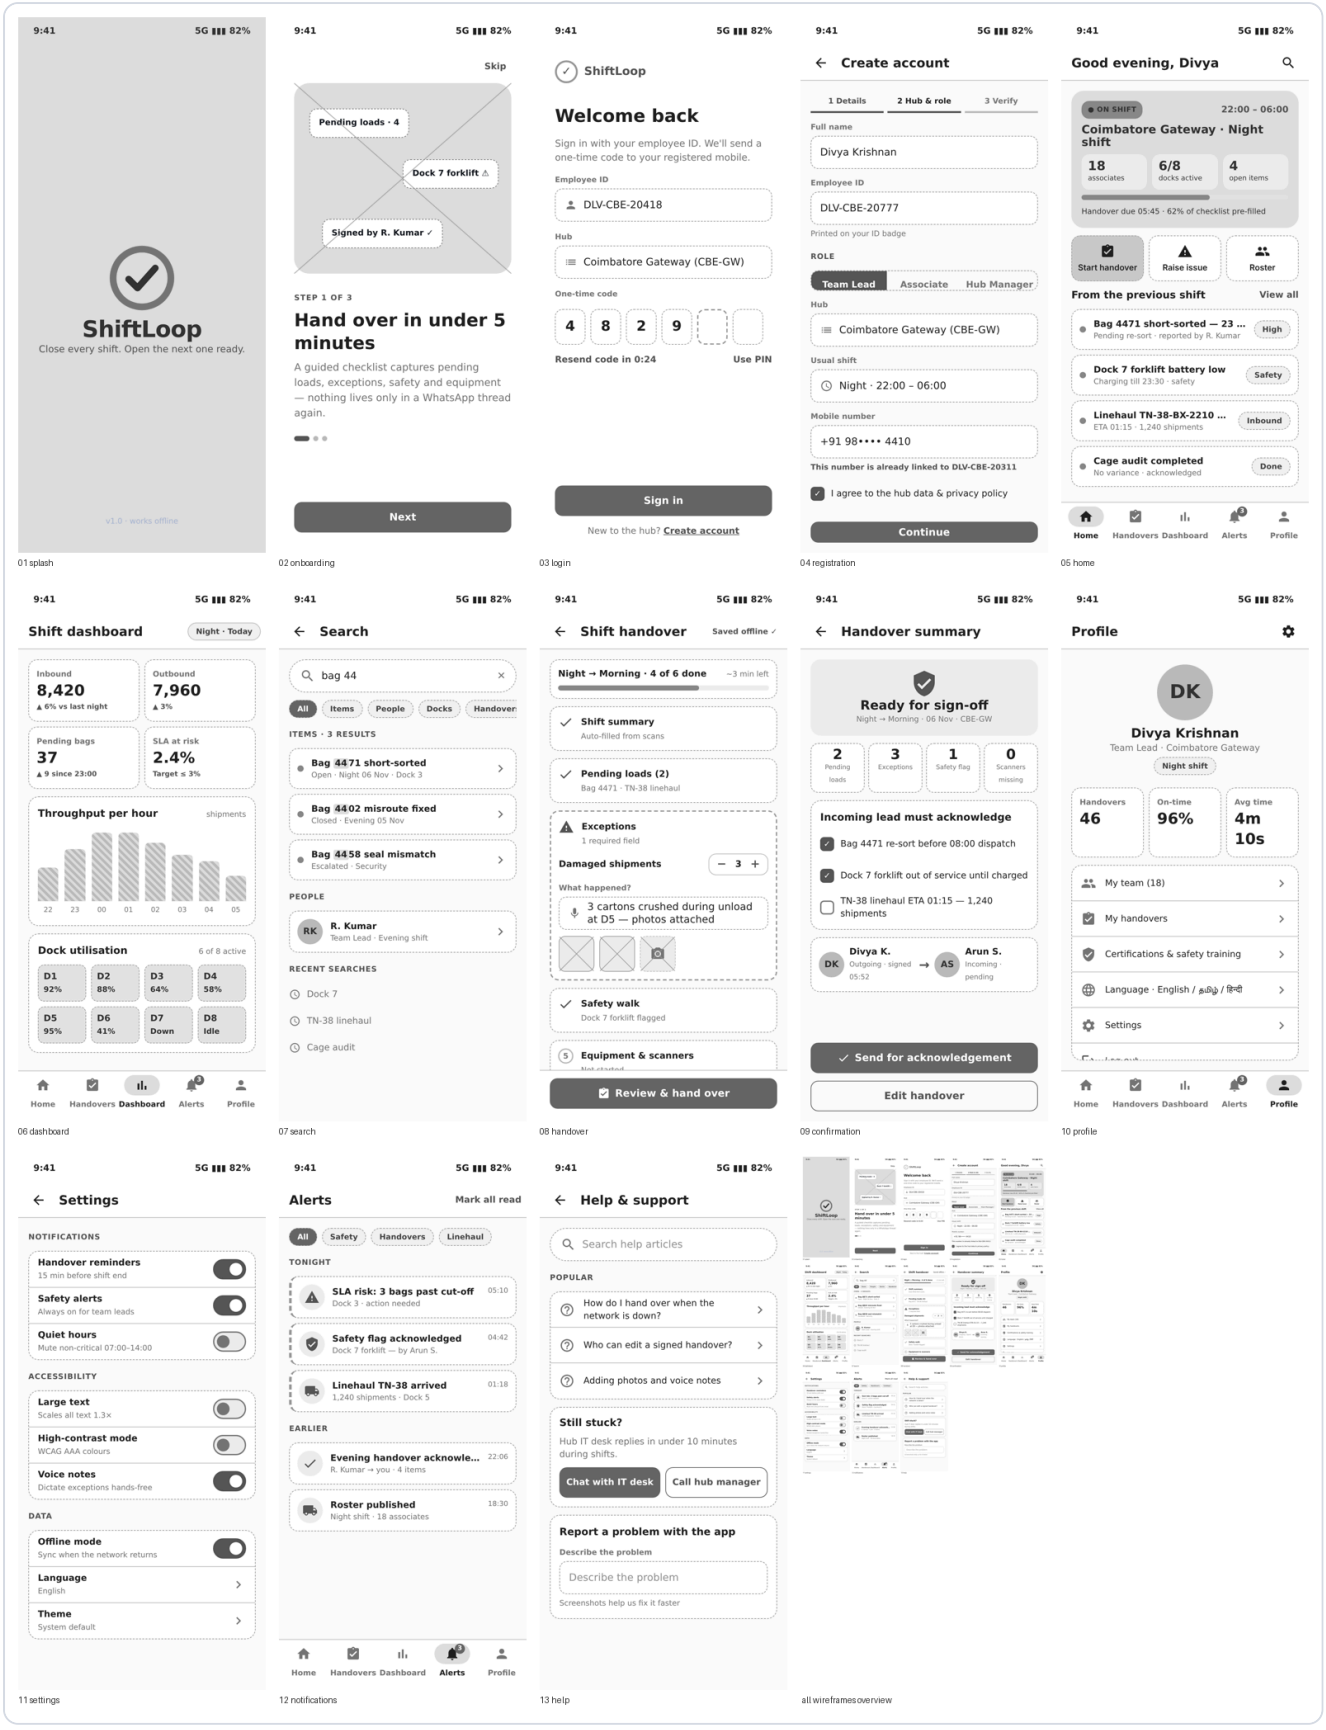

Acknowledge handover	Handovers	Handovers	62%
Crew on shift	Home	Home	50%
Open items	Home	Home	50%
Raise issue	Home	Home	50%
SLA at risk	Dashboard	Dashboard	50%
Weekly trends	Dashboard	Profile & settings	50%
Handover reminders	Alerts	Handovers	62%
Roster published	Alerts	Alerts	62%
Contact IT desk	Help	Help	50%

Responses: show *Open items* on Home **and** link into Handovers; send *Handover reminders* to Alerts but deep-link to the active handover; keep *Acknowledge* reachable from both Alerts and Handovers.

7 · Part F — Sitemap

8 · Part G — Low-fidelity wireframes (13 screens)

Grayscale, no branding; dashed outlines = content zones, crossed boxes = image placeholders. Layout, navigation and hierarchy only.

Screen	Layout & hierarchy decisions

Login	Employee ID first (known by heart), OTP boxes large for gloved thumbs, PIN fallback
Home	Shift card first (context), then 3 quick actions, then items from previous shift sorted by severity
Handover	Progress + offline status pinned at top; 6 collapsible sections; one sticky primary CTA
Summary & sign-off	Counts first, then items that need acknowledgement, then both people with timestamps
Dashboard	4 KPIs in a 2×2 grid, hourly throughput, dock grid with text status (not colour only)
Alerts	Grouped by time, unread marker, filter chips match card-sort groups

9 · Part H — Engineering documentation & next steps

All diagrams are generated from source (Graphviz DOT / Mermaid in `uiux_assets.py`) so they stay editable and versioned. Wireframes are HTML rendered at 390 × 844 so the same structure becomes the hi-fi UI in Task 3 by swapping the stylesheet.

Task 3: design system (tokens, type, colour, components), accessibility audit and high-fidelity screens built directly on these wireframes.
